PROJECTS

ESPC WebApp
- Played a pivotal role in enhancing Humana's ESPC (Enrollment Spreadsheet Processing Center) Web Application, a dynamic platform facilitating customer enrollment into a diverse range of Humana products. My primary responsibilities included implementing crucial updates to incorporate new products and efficiently manage the removal of obsolete offerings.

OPR WebApp
- As a key contributor to the Onetime Process Request (OPR) Web Application, I played a crucial role in enhancing its capabilities to facilitate efficient data loading, translation, and copy operations, all within a robust approval process. My focus was on implementing various changes to streamline the application and improve overall user experience.

SPIDAR WebApp
- The SPIDAR WebApp now stands as a technologically advanced and user-friendly solution for managing and viewing customer enrollment forms. The successful integration of various APIs and the migration to a cloud platform have collectively elevated the application's performance, accessibility, and overall efficiency, providing users with an enhanced and reliable tool for customer data management.

ACHIEVEMENTS

Received Appreciation Letter from CEO of EVIDEN
